Course Scope:

Engineer leader skills, bridging, digital training, demolitions, assured mobility, Engineer tactics, basic construction, situational training exercises, field training exercises, and includes a final phase of embedded assignment-oriented training in advanced construction or advanced tactics in order to prepare the graduate for immediate assumption of an Engineer platoon leader position. The Engineer BOLC III emphasizes the importance of the educational training philosophy of "depth then breadth", so that the Engineer LT can transition into his/her first Army leadership position as a confident and competent leader. By providing students with smaller instructor to student ratios, they will be able to attain deeper knowledge and comprehension levels in order to apply their learning's in the Contemporary Operational Environment, both in training, as well as in the environment of an Army at War.
